JELENA RASSOHINA

PROFILE

- Experienced developer with 5 years of commercial and product development experience in server-side and cloud applications using Node.js (Node.js + Express.js, SAP CAP for Node.js, SAPUI5, cloud solutions for SAP BTP, microservice development, and integrations with external systems)
- Strong background in backend development, API design, integrations, and database management
- Confident working on the client side (React, Vite, Javascript, ECMAScript, TypeScript)
- Familiar with CI/CD principles and experienced in setting up automated pipelines using GitHub Actions and Jenkins
- Worked as part of cross-functional teams on commercial projects involving multiple teams collaborating on the same product in parallel streams
- Regularly interacted with stakeholders — participated in requirements discussions, feature planning, and product demonstrations
- Comfortable working in a product team and taking ownership of specific system components
- Experienced in mentoring junior developers

WORKING EXPERIENCE

Lead fullstack-разработчик at Creative Way, Nizhny Novgorod

November 2024 – July 2025

Technology stack: Node.js (Express.js, TypeORM, Typescript), Python (FastAPI, SQLAlchemy, Alembic), React (Redux, Typescript), PostgreSQL, InfuxDB, Docker, Postman

Responsibilities:

- Designed the architecture and implemented business logic for client-server applications using Node.js and Python, including the development of REST APIs
- Designed data models using ORMs and optimized the PostgreSQL database
- Integrated a real-time location tracking system (RTLS) for employee monitoring
- Integrated with an OPC server to collect telemetry data from industrial equipment (SCADA)

Achievements:

- Implemented an RTLS integration by developing an MQTT client for real-time movement data collection and processing, and visualized employee movement within the client-server application. This enabled the client to track personnel location in real time, improving safety and operational control at the production site
- Organized and optimized data collection from the OPC server by developing an asynchronous client and implementing telemetry storage in InfluxDB. As a result, the client gained a reliable and scalable data stream essential for predictive analytics and early detection of equipment anomalies
- Automated background data processing, reducing the load on the main API and improving system stability under high loads and during integration with external data sources
- Implemented a user authentication and authorization system using JWT with a role-based access model (Node.js)
- Provided technical support and maintenance of the product to achieve the Skolkovo Resident status

Team: 1 fullstack developer, 2 junior developer, 1 DevOps engineer, 1 IACS engineer, 1 UI/UX designer, 1 product manager. Work followed the SCRUM methodology

Client: Russian aviation company

PERSONAL INFORMATION

Nizhny Novgorod

linkedin.com

TECHNOLOGIES

Programming languages and frameworks

Node.js (Express.js, TypeORM)

SAP CAP with Node.js

Python (FastApi, SQLAlchemy, Alembic)

Javascript, ECMAScript, Typescript

Data bases

PostgreSQL, MSSQL (T-SQL), Redis, MongoDB, SAP HANA, InfluxDB

Integrations

RTLS, SCADA, OPC-servers, SSE, WebSockets

Azure AD, MS Entra B2B, MS Graph API, AWS S3Bucket

Testing

Jest, Chai, Mocha

Pytest, Postman, Apache JMeter

Tools and other

Docker, Bash, Git, Grafana, Kibana, SonarQube, Swagger/OpenAPI, Jira, Confluence

LANGUAGES

Russian	Native
English	B2
Latvian	B2

CERTIFICATION

SAP Certified Development Associate – SAP Extension Suite

credly.com

EDUCATION

2022 – now

Transport and Telecommunication Institute, Master of natural science in computer information systems

2006 – 2009

Transport and Telecommunication Institute, Bachelor of social sciences in management

Senior software engineer at EPAM Systems, Riga

September 2023 – March 2025

Technology stack: Javascript (ES13), Node.js (Express.js, SAP CAP), Jest, Chai, Postman, SAP CAP, SAP BTP, SAP Fiori, SAP HANA, Kibana, SonarQube, Git, Jira

Responsibilities:

- Designed and implemented data structures (Entity-Relationship Diagrams, SAP HANA SQL relational databases, Core Data Services)
- Developed and maintained REST APIs for cloud applications using Node.js (microservice architecture), implemented unit and integration tests (Jest, Chai), and configured deployment on SAP Cloud Foundry (SAP Business Technology Platform)
- Integrated external services with internal systems to enable cross-tenant access for external users to the client's internal resources; implemented Single Sign-On based on Azure AD
- Developed client-side applications using the SAP UI5 framework (JavaScript, ES13) based on stakeholder requirements
- Prepared documentation, including ERD diagrams, flowcharts, test scenarios, user guides, and training materials; conducted feature demonstrations

Achievements:

- **Designed and implemented a robust and scalable data structure** that simplified service maintenance throughout the entire project lifecycle
- **Developed service business logic in Node.js using OData**, which standardized integrations and accelerated the delivery of new client requirements
- **Integrated internal services with Microsoft Entra B2B** to automate the addition of external users, streamlining client access management and accelerating user onboarding
- **Configured a job scheduler** and implemented business logic for automated email notifications
- **Developed the client-side of a cloud application** in line with business requirements, resulting in a more intuitive interface and higher user engagement

Team: cross-functional team of 8 members - 1 frontend developer, 1 backend developer, 2 full-stack developers, 2 ABAP developers, 1 UI/UX designer, and 1 product owner. Work followed the SCRUM/Agile methodology

Clients:

- German multinational company producing sportswear and accessories
- U.S. online travel agency helping users find discounts on hotels, flights, and more

Senior system analyst at Accenture Baltics, Riga

February 2021 – September 2023

Technology stack: Javascript (ES12), Node.js (Express.js, SAP CAP), Jest (Chai, Mocha), Postman, Apache JMeter, SAP BTP, Jenkins, Groovy, Kibana, Grafana, SonarQube, Git, Jira

Responsibilities:

- Designed and implemented data structures (Entity-Relationship Diagrams, SAP HANA SQL relational databases, Core Data Services)
- Developed and maintained REST APIs for cloud applications on Node.js (both monolithic and microservice architectures), implemented unit and integration tests (Jest, Chai), and configured deployment on SAP Cloud Foundry (SAP Business Technology Platform)
- Created client-side applications using the SAP UI5 framework (JavaScript, ES12)
- Automated testing and deployment of cloud applications
- Mentored junior developers

Achievements:

- **Developed a SaaS solution in the utilities domain** that enabled modular integration of industry services such as invoicing, billing, customer management, order, and resource management. Responsibilities included developing Node.js services, implementing authentication and authorization (JWT, OAuth 2.0), building the client side of the cloud application, and integrating with internal and external systems via REST APIs
- **Automated the CI/CD process** for SAP Cloud Foundry using Jenkins, reducing release time and minimizing deployment errors
- **Designed and implemented a series of load tests** to identify system bottlenecks using JMeter, set up pipelines for systematic performance testing, and visualized the results in Grafana
- **Developed and optimized Node.js services** for managing marketing campaigns, including filtering and displaying promotions by geography, enabling the client to tailor content for local markets more efficiently
- **Integrated with AWS S3 Bucket** for media storage and retrieval in marketing campaigns, improving data availability and reducing infrastructure costs
- **Developed and implemented a Git Branching Strategy** to streamline the development workflow

Team: cross-functional teams of 8-10 members, including frontend developers, backend developers, full-stack developers, a product owner, and a scrum master. Work followed the SCRUM/Agile methodology

Clients:

- Italian multinational food manufacturing company
- Finnish company in the marine and energy markets
- German multinational software corporation specializing in enterprise resource planning (ERP) systems
